Title: Some university students want to learn about other subjects. Others believe it is more important to give all their time and attention to studying for a qualification. Discuss this view and give your own opinion

So as we see the university students is divided into two types.

The first type is believe that it is useful and important to learn about other subjects, may they want to change the boring mood of study. Or they want to add some general informato insted of the basic subjects.

In addition, some of student don't like studying so they want another side it that they can be creative in it.

On the other hand, the second type of students prefer that to study just the basic subjects.

Maybe they want to focus only on improving themselves in the universal subjects, and to get good marks. Or they don't have a time to other subjects.

In my opinion, I think it is good to study addition subjects, But just in one case, the subjects will be added shouldn't be difficult or boring. So it should be useful and the student will learn something good by them.

But if the additional subject will be difficult or boring, the student will don't like to study it.

There are another important point, which is the scoring. For this reason I will change my attitude, the marks for this subjects should add to the level of student not the opposite.

It should have positive effect on the student, and their academic level. At the end, the student should concentrate on their basic subjects, and that's it
